

Nitesh Kumar

Senior Software Engineer

 me.nkj7@gmail.com  +91-9810354424  Zirakpur, Punjab, India (140603)

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience designing, building, and maintaining scalable web applications and platform services using Ruby on Rails, OpenSearch, AWS, Kubernetes, Snowflake, and modern cloud technologies.

Proven track record of leading large-scale platform modernization initiatives, including search infrastructure migrations, cloud-native microservices, security upgrades, and data platform integrations. Experienced in system design, performance optimization, distributed systems, production reliability, observability, and cross-functional collaboration.

Strong expertise in backend engineering, API development, search technologies, CI/CD automation, and production support for high-availability SaaS platforms serving enterprise customers.

SKILLS

Technical Skills — | Languages: Ruby, SQL, JavaScript | Frameworks & Libraries: Ruby on Rails, RSpec, Sidekiq, Delayed Job, ReactJS, jQuery | Search & Data: OpenSearch, Elasticsearch, Snowflake, Kafka, Redis | Cloud & Infrastructure: AWS, Docker, Kubernetes, Helm, Linux | Monitoring & Observability: New Relic, Log Analysis, Production Monitoring | Architecture: Microservices, REST APIs, Distributed Systems, Event-Driven Systems | Development Practices: Agile Scrum, CI/CD, Git, Code Reviews, Test Automation, Performance Optimization

WORK EXPERIENCE

Senior Software Engineer Employ Inc

October 2023 – Present | Remote

- Led the modernization of multiple Ruby on Rails applications, upgrading Ruby versions from 2.7 to 3.2 while maintaining application stability and test coverage.
- Designed and developed a dedicated OpenSearch-based microservice to support scalable search functionality across multiple products, reducing dependency on legacy search infrastructure.
- Built and maintained indexing and search APIs supporting advanced filtering, faceted search, keyword search, and high-volume data processing.
- Developed internal Ruby gems and platform integrations to securely retrieve and process data from Snowflake, enabling enterprise reporting and analytics solutions.
- Containerized applications using Docker and deployed services on Kubernetes, improving deployment consistency and scalability.
- Implemented monitoring, observability, and performance tracking using New Relic, enabling proactive issue detection and faster production incident resolution.
- Led remediation of critical and high-severity security vulnerabilities across multiple repositories through dependency upgrades, risk assessments, testing, and deployment coordination.
- Collaborated with product, QA, SRE, and platform teams to deliver production-ready solutions while maintaining high system reliability and performance.
- Participated in on-call rotations, production incident management, root cause analysis, and continuous service improvements.

Software Engineer Aloha Engineering

March 2022 – September 2023
Remote

- Developed and delivered new product features using Ruby on Rails following Agile development practices.
- Designed and implemented RESTful APIs supporting web and mobile applications.
- Built comprehensive automated test coverage using RSpec, improving application quality and reducing production defects.
- Participated in architecture discussions, code reviews, and technical design sessions to ensure maintainable and scalable solutions.
- Successfully replaced third-party file upload infrastructure, reducing operational costs and simplifying application architecture.

- Worked closely with frontend developers, QA engineers, and business stakeholders to deliver high-quality software releases.

Ruby on Rails Developer

March 2020 – March 2022 | Bangalore

Relyon Softech Pvt Ltd

- Developed payroll, taxation, and compliance-related features used by thousands of organizations across India.
- Integrated biometric attendance systems with enterprise applications through API-based solutions.
- Implemented PAN and tax compliance features supporting evolving government regulations.
- Developed XML-based reporting solutions using Nokogiri and automated data-processing workflows.
- Built and maintained background processing solutions using Delayed Job.
- Created automated test suites using RSpec and actively participated in production support and issue resolution.
- Contributed to system enhancements, performance improvements, and feature development across multiple modules.

Ruby on Rails Developer

June 2021 – December 2021

Ayam

Remote, Freelancing

- Ayam is a meditation and well-being app aimed at providing a space for self-reflection and personal Growth.
- Implemented various gems and libraries to extend the functionality of Ruby on Rails applications, such as Devise for authentication, Paperclip for file uploads, and Sidekiq for background job processing.
- Developed queries using ActiveRecord and ActionPack for handling HTTP requests and responses. Both gems are shipped in-built with the Ruby on Rails framework.
- Successfully deployed Ruby on Rails applications on cloud platforms like Heroku and handled configuration and scaling challenges.
- Collaborated with the business team to gather requirements and deliver solutions.
- Built and modified APIs to integrate with the Android and iOS front end.
- Implemented push notification systems for Android and iOS using the FCM and OneSignal gems.
- Demonstrated ability to troubleshoot and debug complex issues in Ruby on Rails applications, ensuring smooth operation and user satisfaction.

Software Development Engineer - I

April 2019 – January 2020 | Bangalore

Nestaway Technologies Pvt Ltd

- Nestaway is an Indian e-commerce online home rental network.
- Mentored technical support engineers and developed features based on requirements.
- Collaborated closely with the customer care team to meet their needs.
- Conducted code reviews for support engineers.
- Shared knowledge within the team through talks and documentation.
- Worked closely with the QA team to write comprehensive test cases.

Technical Support Engineer - II

April 2017 – March 2019 | Bangalore

Nestaway Technologies Pvt Ltd

- Trained with software developers to enhance technical skills as a Senior technical support engineer.
- Documented reported issues and created FAQs for recurring problems.
- Wrote Ruby scripts to update data impacted by bugs.
- Assisted other teams in understanding application functionalities.

Technical Support Engineer - I

April 2016 – March 2017 | Bangalore

Nestaway Technologies Pvt Ltd

- Automated tasks using Ruby scripts.
- Worked with open-source platforms like Redmine.
- Assisted in support hours of operation and handled production emergencies.

Assistant Manager - Operations

April 2015 – March 2016 | Gurugram

Nestaway Technologies Pvt Ltd

- Generated reports and analyzed data, including revenues and expenses.
- Addressed operational issues promptly.
- Oversaw the furnishing process, vendor onboarding, and management.

PROJECTS

OpenSearch Migration & Search Platform Modernization

- Led migration efforts from legacy search infrastructure to OpenSearch-based architecture.
- Developed search APIs, indexing pipelines, filtering, sorting, faceted search, and advanced search capabilities.
- Improved scalability, maintainability, and observability of enterprise search systems.

Snowflake Data Platform Integration

- Developed internal libraries and APIs to integrate enterprise applications with Snowflake.
- Enabled automated reporting, analytics workflows, and secure data access across business systems.

Security Modernization Initiative

- Remediated critical and high-severity dependency vulnerabilities across multiple production applications.
- Standardized upgrade, testing, deployment, and validation processes across engineering teams.

Cloud-Native Microservices

- Designed and deployed containerized services using Docker and Kubernetes.
- Improved deployment consistency, scalability, monitoring, and operational reliability.
